

SMART SOLUTIONS FOR THE LABELING INDUSTRY

MOTORIZED CORE HOLDER (MCH)

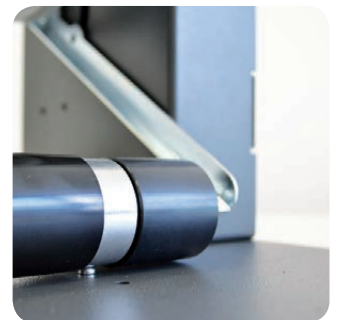

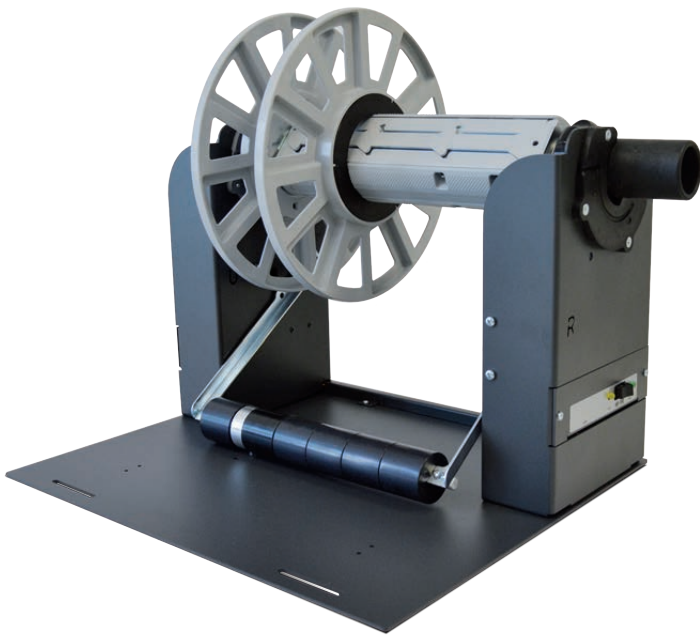

Our range of motorized core holders can handle labels up to 240mm (9.45") wide, and rewind or unwind rolls having an outside diameter up to 250mm (9.84") (*contact us for the availability of different outside diameter*).

Rolls are rewinded/unwinded onto a 3" core holder and the possibility to adjust the direction of rotation, clockwise or counterclockwise, allows to rewind / unwind labels both face in and face out (only "SW" models).

Thanks to its revolutionary design and toughness, our MCH rewinders and unwinders are perfect for high and heavy duty jobs.

The motor is located inside the core holder and once the job is done, users can easily remove the core holder.

The machine can be configured to rewind or unwind, so depending on its use it can be placed in front (rewinder) or behind the printer (unwinder) and it can be equipped with software for specific use with standard thermal transfer printers or inkjet color label printers with label back-feeding.

The roll weight will no longer be a problem!

SPECIFICATIONS				
	REWINDERS		UNWINDERS	
	MCH27R2	MCH51R2	MCH27U2	MCH51U2
Maximum roll diameter	250mm	250mm	250mm	250mm
Maximum roll width	225mm	225mm	225mm	225mm
Speed	27rpm	51rpm	27rpm	51rpm
